Quail and Cuckoo Synchronization: If the cuckoo or quail call are wrong, pull up the weights, then proceed as follows. Open the door on the left side of the clock and push in on the vertical wire. The quail will call. Repeat until the quail calls the correct quarter hour. Close the left door. Open the door on the right side of the clock and push in on the vertical wire. The cuckoo will call. Repeat until the cuckoo calls the correct hour. Close the right door. Pull up the weights which have descended.

NOTE: Don't let clock run completely down as that will get it out of synchronization. Stop the pendulum if leaving for longer than the clock will run.
